

Slide 1:

Currently, the **PackTest Ammonium** costs **₱9,600** per year, so for **2 years it totals ₱19,200**. On the other hand, the total cost of installing the automated ammonia sensor system is **₱12,395**, which already covers **two years of use**.

With the help of the system the company can save **₱6,805** in just two years, while also improving accuracy and reducing manual work.

Slide 2:

Using the PackTest method, the cost would reach **₱38,400 for four years**. In comparison, the total cost of the ammonia sensor system for four years is **₱18,395**. This results in a total savings of **₱20,005**.

Aside from the financial savings, this system also helps prevent the company from facing heavy penalties due to ammonia non-compliance, ensuring continuous regulatory compliance, safer operations, and long-term cost efficiency.
